## Rodent Control Service Information Sheet

Our rodent control service consists of 4 visits. We do not offer a warranty after these 4 visits because rats and mice are notorious for continually re-infesting.

### First visit:

\_\_\_ We do a thorough inspection of the home or building, checking for areas where rodents may enter. We record any conditions that may be conducive to worsening the infestation. If there are entry points or favorable conditions, it is essential that these be fixed as soon as possible, or rodent problems will go on indefinitely. Let us know if you would like an estimate for repairing the entry points (*Exclusion Work*).

\_\_\_ We set snap traps in the areas where there is evidence of rodents. Usually this includes the crawl space, (if present), but may also include the interior, garage, outbuildings, or attic, etc... In cases of severe infestation we may place rodent bait stations (boxes with rodent poison secured inside) on the exterior, but in most cases we do not.

### Second visit (2-3 days after 1st visit):

\_\_\_ Snap traps will be checked, dead rodents removed, and traps will be re-baited.

### Third visit (2-3 days after 2nd visit):

\_\_\_ Snap traps will be checked, dead rodents removed, and traps will be re-baited. Place pacs may also be used in the attic only, by this visit to monitor activity.

### Fourth & final visit (2-3 days after 3rd visit):

\_\_\_ Snap traps and any other equipment are removed from the premises, along with any caught rodents.

It is ideal to have the *exclusion work* done by the 3rd visit, so anything sealed in can be caught. If *exclusion work* isn't done and we need to continue servicing the traps there is an additional fee per time after the original 4 treatments.

Again, there is no warranty after the rodent control service is completed, due to the fact that new rats/mice may try to enter the building after we catch the existing rodents. There may also be entry points that cannot be located due to how the building was constructed, with rodents continuing to come and go freely.

If you have any concerns in between scheduled visits or at any time during this process, please feel free to call our office and 813-703-4673.

In rare cases, there may not be any rodents caught at all during this process, due to the unpredictability of their behavior, and the fact that evidence of rodent activity doesn't always mean that rodents are still present.
